TPS080

Heated propagation – the secret of the professionals

You now have access to the secret known by the professionals for years. By using bottom heat propagation systems, you'll have the benefit of controlled growing conditions. This promotes faster and healthier growth, and the opportunity to grow exotic plants, flowers, herbs and cacti all year round.

Ideal for cloning and hydroponics

The Heat'n'Grow Systems are equally successful with soil and hydroponic based gardening. This makes them the ideal solution for propagation and cloning.

Low operating costs

All Heat'n'Grow Propagation systems use a high-tech carbon plastic element. This breakthrough in technology ensures that you enjoy very low operating costs, from less than half of 1 cent per hour.

Control at your fingertips

Some models come with a built in 0-40°C thermostat. So it's as easy as turning the dial to achieve exact temperature control. The high-tech heating element guarantees even heat distribution, ensuring direct heat penetration to the roots of the plant.

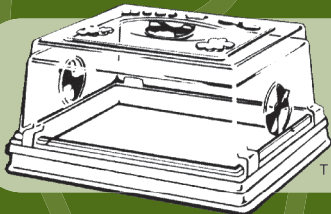

Four models to suit your needs

With 4 different models to choose from, you can be sure that there is an ideal propagation unit to suit your needs and budget. Models are available from a single tray, to a 4 tray unit.

Specifications

MODEL	WATTS	SIZE (mm)	THERMOSTAT	TRAYS
TPS020	9	300 x 400	-	1
TPS030	20	390 x 400	✓	1
TPS040	40	670 x 400	✓	2
TPS080	80	1300 x 400	✓	4

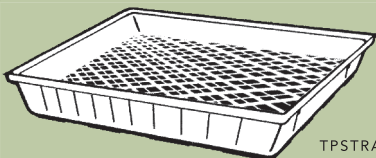

PROPAGATION ACCESSORIES

TPSTOP

Clear Top

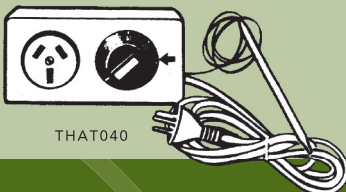

The Heat'n'Grow clear top is a plastic cover which can be used in conjunction with the heated propagation trays, or independently. The clear top creates a mini-greenhouse effect, achieving great propagating results.

TPSTRAY

Seedling and drip trays

Both trays are sized to fit the Heat'n'Grow clear tops and heated propagation trays. By combining these accessories, you will enjoy a professional yet low cost approach to all of your growing needs.

THAT040

Thermostats

Heat'n'Grow model, THAT040 thermostat is designed to ensure constant temperature control of growing medium. Temperature range can be set from 0-40°C and a remote sensing probe is included.
